BECAUSE SAFETY AND RELIABILITY MATTER...

The safety and reliability of your lifting equipment matters.

Whiting Services Inc has the resources to support you.

Whether your service need is the result of our industry leading CHIP or RHIP inspection program, breakdown, or a routine maintenance issue, we have the team to address your need.

All repairs are executed to ensure compliance with OSHA, CMAA, ANSI, and FRA regulations. Our knowledge also allows for customization of services to meet your unique production needs.

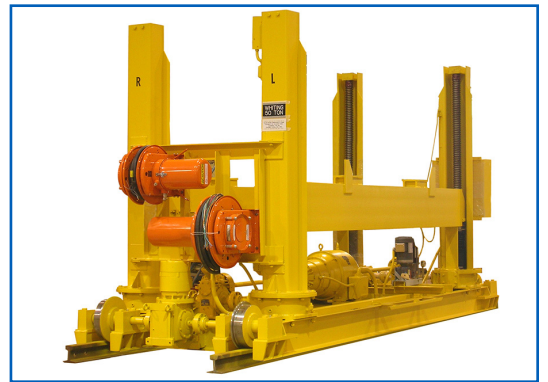

THE PROCESS

Having WSI perform your compliance inspection(s) generates your CHIP or RHIP Report. A review meeting is held to go through the report and ensure you have a thorough and clear understanding of the health of your equipment along with our recommended action(s).

Whiting Services is also here to respond to your maintenance needs. Contact us to schedule a discussion and design an appropriate maintenance plan to fit your production environment and fiscal resources.

Runway issues? Whiting's services will deploy our patented TrackRunner™ Robot which efficiently surveys your crane runway. It offers significant improvement over current survey methods in the field.

THE RESULTS

Our world-class services improve the safety and productivity of your lifting equipment, while lowering the total cost of ownership. With technicians strategically located around the country, Whiting Services can rapidly respond 24/7 to help resolve unexpected problems.

Whiting Services, Inc - there for you when you need a lift.
