BECAUSE SAFETY AND RELIABILITY MATTER...

The safety and reliability of your lifting equipment matters. Whiting Services Inc (WSI) has the resources to support you. Whether your service need is the result of our industry leading RHIP inspection program, breakdown, or a routine maintenance issue, we have the team to address your need. All repairs are executed to ensure compliance with OSHA and FRA regulations. Our knowledge also allows for customization of services to meet your unique needs.

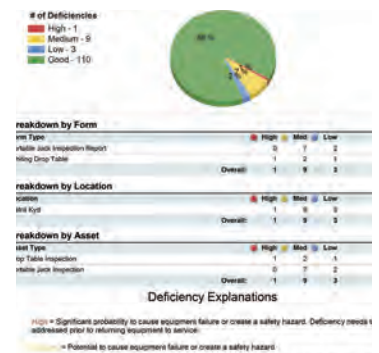

THE PROCESS

Having WSI perform your compliance inspection(s) generates your RHIP Report. A review meeting is held to go through the report and ensure you have a thorough and clear understanding of the health of your equipment along with our recommended action(s).

Separately or as part of your inspection, you may decide to modernize your equipment. A modernization is often more cost effective than replacement of the entire unit and delivers many of the same great advantages, while extending useful life for capital depreciation. WSI can help you determine which is the best option for your needs.

WSI is also here to respond to your maintenance needs. Contact us to schedule a discussion and design an appropriate maintenance plan to fit your production environment and fiscal resources.

THE RESULTS

Our world-class services improve the safety and productivity of your lifting equipment, while lowering the total cost of ownership. With technicians strategically located around the country, Whiting Services can rapidly respond to help resolve unexpected problems.
